

HOW CAN I CLEAR MY AGENCY'S ERRORS ON THE ZX02 MISMATCH REPORT??

(Continuing Series)

Issued 02/03/06

What is the most common error reported on ZX02?

MISMATCH PLANNED COMP/IT0008 PAY GRADE

USERS SHOULD PAY SPECIAL ATTENTION TO THIS ERROR!!!!

When reported, the Planned Compensation Pay Grade on the Position (or the Job) does **not** match the PS Group on the employee's **Basic Pay** infotype (0008).

To correct this error, decide if the position actually has a base supplement or an SER. If it does, simply check the Pay Grade on the Position against the PS Group on the employee's **Basic Pay** infotype (0008). You should find that these do not match.

Many positions that no longer have a Base Supplement or an SER still have a Planned Compensation record! The information stored on these screens is most often the cause, because the Pay Grade information is outdated. Without a Base Supplement or an SER, there is no need for a PLANNED COMPENSATION RECORD on the position. These unnecessary records should be delimited.

If no Planned Compensation Infotype exists on the position, the mismatch exists because the Pay Grade on the Job does not match the PS Group on the employee's **Basic Pay** infotype (0008). Research to determine which of these is wrong. The proper way to correct this error is to verify your position is described by the correct job.
